

WK22 & PW22

PRO WINGS are one of the most beneficial pieces of snow removal equipment you can add to your snow removal arsenal.

Why use **PRO WINGS**? They provide an additional 20" of blade width with a minimal increase in the overall weight of your snow plow.

Trail off is reduced and problem areas such as parked cars or moving snow across a lot becomes more manageable. Snow plowing time can be reduced 25% - 50%. Snow plow **PRO WINGS** fit most pick-up mounted snow plows.

PRO WINGS are not recommended as an extension wing for Meyer 2 Meter snow plows, v-plows, plows 8-1/2' or bigger, BOSS plows, any poly moldboard plow as well as any stainless steel moldboard plow.

Can be used on any truck mounted straight blade steel moldboard up to 8ft. This includes the following brands: Meyer, SnowEx, Western or Fisher.

Installation is a short 2 hours without special tools, and then just 3 quick pins per side to remove or replace each **PRO WING** in seconds. The tripping action of your snow plow is unaffected by **PRO WINGS**. This wing extension rubber edge on the **PRO WINGS** is long lasting and helps prevent damage to the **PRO WING**.

PRO WINGS are referred to as plow wings, plow, plow wing extensions, extenders, wing attachments, side mount wings, wings, PW22, snow wing.
