

HT SERIES™ SNOWPLOW

HT SERIES™

HT SERIES™

THE ORIGINAL TRIP-EDGE DESIGN Only the edge of the blade trips back when encountering an obstacle. This system is much less jarring than a full-trip blade and, because the blade stays upright, plowed snow remains in front of the blade.

THE INDUSTRY'S BEST PROTECTION AGAINST WEAR and RUST JUST GOT BETTER! With our STORM GUARD™ powder coating process, automated climate-controlled powder booths ensure uniform coverage to all surfaces. We've added a new epoxy primer to enhance powder coat adhesion and improve corrosion resistance. Plus our trademark Fisher yellow finish is reformulated to maintain that new plow look, even longer.

SECURITY GUARD™ SNOWPLOW ANTI-THEFT SYSTEM The exclusive FISHER Security Guard Anti-Theft System is a safe and secure way to electronically "lock" your snowplow while it is detached from the truck, providing a deterrent from theft or non-permitted use.

Unlike physical locks that can be cut or removed, the Security Guard Anti-Theft System electronically synchronizes your control and plow module. When activated, it disables the electronic control system and renders the plow inoperable to unauthorized users.

As half-ton pickup truck manufacturers reduce vehicle weight in their quest for increased fuel efficiency, plowers struggle to find a legitimate, rugged, hard-working snowplow that matches their vehicle specifications.

That's why Fisher Engineering developed the sleek new HT Series™ snowplow. Targeted specifically for today's half-ton 4WD pickup trucks, the FISHER® HT Series snowplow is a full-size, full-featured snowplow with the strength to handle standard-duty commercial, institutional and extended-use homeowner applications.

And since it's built by Fisher Engineering, it's backed by a 60-year heritage of top product performance and unmatched customer loyalty.

Exclusive scrape lock feature hydraulically locks the blade down for clean scraping and back dragging.

The proven Minute Mount® 2 System is simple, reliable and fast. The new HT Series snowplow features a handy push-bar that makes mounting even easier. It also features multiplexed electrical technology.

Covered hydraulic system provides protection from the elements.

FISHER INTENSIFIRE™ halogen headlamps feature state-of-the-art reflector optics for a smooth, wide beam pattern that illuminates the entire plowing surface.

- 75-degree attack angle provides improved scraping and better back dragging.
- 15-1/2-inch curl radius improves snow rolling action.

- 6 vertical ribs and a full-length horizontal tube provide extra stability and strength to the core of the blade.
- A pair of vertical compression trip springs deliver trip-edge protection.

Control options include the hand-held Fish-Stik® or a compact joystick control.

Optional accessories include 3/8" and 1/2" steel cutting edges, cast iron shoes, curb guards, rubber deflector and poly SnoFoil.

Blade Width	Blade Height	Blade Gauge	Trip Springs	Ribs	Angling Rams	Plowing Width (full angle)	Approx. Weight (less mount)	Wear Shoes (cast iron)	Optional Cutting Edge
7'-6"	27"	14	2	6+Tube	1-1/2" x 8"	6'-7"	414#	optional	3/8" x 6" steel 1/2" x 6" steel
